

Shimaila Hanif

🌐 Portfolio ✉ hshimaila@gmail.com 🌐 hshimaila in Shimaila Hanif

Professional Summary

Results-driven Full-Stack Developer and final-year B.Tech (IoT) student with proven experience building and deploying production-grade web applications. Specialized in React.js frontends, Django REST Framework, Flask backends, and PostgreSQL databases. Experienced in integrating AI/ML and NLP-driven features into real-world applications, implementing JWT authentication, and containerizing systems with Docker — evidenced by deployed projects. SIH'25 finalist and top-ranked student in the branch. Seeking an entry-level role in full-stack software engineering.

Education

Bachelor of Technology (B.Tech)- Internet of Things
Samrat Ashok Technological Institute, Vidisha
CGPA: 8.49 / 10

June 2026

Technical Skills

LANGUAGES: C++, Python, JavaScript (ES6+), SQL

FRONTEND: React.js, Context API, React Router DOM, Custom Hooks, HTML5, CSS Modules, Tailwind CSS, Bootstrap

BACKEND: Django, Django REST Framework, Flask, JWT Authentication, RESTful API Design, Nginx

AI/ML/NLP: Scikit-learn, SpaCy, NLTK, TF-IDF, Random Forest, Google Gemini API, pdfplumber, pdfminer

DATABASES: PostgreSQL, SQLite, MySQL

DEVOPS & CLOUD: Docker, Docker Compose, Railway, Vercel, Render, CI/CD, GitHub Actions

TOOLS & PLATFORMS: Git, GitHub, Linux, Postman, Figma, Axios

Projects

PhishGuard — AI-Powered Phishing Detection System

[Github](#) | [Live](#)

- Built a full-stack phishing detection app using Flask and React, integrating NLP, Random Forest ML, and threat intelligence APIs (Google Safe Browsing, PhishTank) for real-time email and URL analysis
- Engineered a multi-layer risk scoring pipeline combining TF-IDF vectorization, SpaCy preprocessing, and 500+ URL structural features into a single weighted confidence score
- Containerized with Docker and deployed to Railway with automatic GitHub-triggered CI/CD redeloys

Ordina — Smart Task Management System

[Github](#) | [Live](#)

- Built and deployed a full-stack productivity app with JWT authentication (access + refresh tokens), protected routes, and secure password management.
- Designed 8+ RESTful API endpoints covering task CRUD, user stats, and authentication flows.
- Built a real-time task dashboard with filtering by status, category, and priority; instant search; and a productivity streak system.
- Managed app-wide dark/light theming via Context API and custom React Hooks for localStorage and state.

JobLens — AI Resume Matcher

[Github](#) | [Live](#)

- Built and deployed an AI-powered resume analyzer that parses PDF resumes and matches them against job descriptions using NLP (spaCy) and scikit-learn.
- Designed a resume-to-job matching engine with skill extraction, gap analysis, and a percentage-based scoring algorithm.
- Exposed a single REST endpoint accepting multipart PDF + text input, returning structured JSON with matched/missing skills and suggestions.
