Professional Summary

Results-driven Full-Stack Developer and final-year B.Tech (IoT) student with proven experience building and deploying production-grade web applications. Specialized in React.js front-ends, Django REST Framework backend, and PostgreSQL databases. Experience in integrating AI/ML-driven features into real-world applications, implementing JWT authentication, and architecting scalable systems - evidenced by deployed projects. SIH'25 finalist and top-ranked student in the branch. Seeking an entry-level role in full-stack software engineering.

Education

Bachelor of Technology (B.Tech)- Internet of Things
Samrat Ashok Technological Institute, Vidisha
CGPA: 8.49 / 10

June 2026

Technical Skills

LANGUAGES: C++, Python, JavaScript (ES6+)

FRONTEND: React.js, Context API, React Router DOM, Custom Hooks, HTML5, Tailwind CSS, Bootstrap

BACKEND: Django, Django REST Framework, JWT Authentication, RESTful API Design

AI/ML/NLP: spaCy, scikit-learn, Google Gemini API, pdfplumber, pdfminer

DATABASES: PostgreSQL, SQLite, MySQL

TOOL & PLATFORMS: Git, GitHub, Linux, Postman, Figma, Axios, Vercel, Render

Projects

Ordina — Smart Task Management System

[GitHub](#) | [Live](#)

- Built and deployed a full-stack productivity app with JWT authentication (access + refresh tokens), protected routes, and secure password management.
- Designed 8+ RESTful API endpoints covering task CRUD, user stats, and authentication flows.
- Built a real-time task dashboard with filtering by status, category, and priority; instant search; and a productivity streak system.
- Managed app-wide dark/light theming via Context API and custom React Hooks for localStorage and state.

JobLens — AI Resume Matcher

[GitHub](#) | [Live](#)

- Built and deployed an AI-powered resume analyzer that parses PDF resumes and matches them against job descriptions using NLP (spaCy) and scikit-learn.
- Designed a resume-to-job matching engine with skill extraction, gap analysis, and a percentage-based scoring algorithm.
- Exposed a single REST endpoint accepting multipart PDF + text input, returning structured JSON with matched/missing skills and suggestions.
- Processed and analyzed PDF resumes with NLP pipeline for structured data extraction

Hostel Management System – Full Stack Web Application

[Github](#)

- Architected a role-based full-stack hostel platform for students and admins with 20+ RESTful APIs.
- Covered room allocation, mess billing, payment tracking, attendance, and complaint management end-to-end.
- Designed normalized PostgreSQL schema with Django ORM; automated billing workflows to reduce manual processing.
- Integrated frontend with Axios and React Router; used React Hooks for state management.
